EnneadTab OS
Installation Guide

EnneadTab OS is a collection of mini puglins that works across major production softwares. To install to please follow steps below:

1. Go to github to download the installer and run it.
https://github.com/zsenarchitect/EA_Dist/tree/fce4bb086d63958188494a0e8da99ab9e9aab a76/_Install%20Me

2. Now you should have this folder under your Document, and you can install plugin following each subfolder.
    2.1 Revit
        1. Have pyRevit installed. Skip if you have already installed.
https://github.com/pyrevitlabs/pyRevit/releases

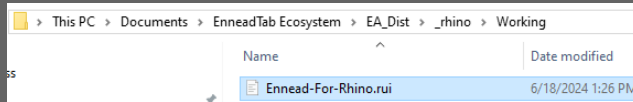

Any latest version is fine.

        2. With no Revit open, click on this.

        3. Start Revit, you should see it on top of the tool bar.

2.2 Rhino

1. Navigate to this folder and locate the rui file.

2. Have one and only one Rhino open, drag that rui file to the main window.

3. Register from top menu.

4. Add startup command.

4. Restart Rhino and finish.
